DETAILED ACTION

An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

Applicant is advised of the availability of the publication "Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office." This publication is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 28-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weaver et al. (col. 1, 6, and the claims) and Gavrilenko et al. taken with Kats et al.

Weaver teaches that involvement of the lungs leads to pneumonia. It also teaches that lysozyme is used to treat cystic fibrosis patients. Since cystic fibrosis leads to pneumonia it would have been obvious for one of ordinary skill in the art to use lysozyme to treat pneumonia since cystic fibrosis is known to be treated with lysozyme and cystic fibrosis leads to pneumonia. Further, as noted by Gavrilenko, lysozyme is used to treat chronic bronchitis which also leads to pneumonia. Further, it teaches that lysozyme is administered intratracheally. Kats is cited to show that lysozyme is derived commonly from chicken eggs.
